

Report Number: 56

SEN: Speech, Language and Communications needs

EHCP REPORT #56

Section A:

The child is a curious and energetic toddler who enjoys sensory play, particularly with water and tactile materials. His parents aspire for him to develop the confidence to interact with peers and to have his communication needs met so he can express his wants and needs clearly. They hope for a supportive environment that fosters his emotional regulation and prepares him for a successful transition into a nursery setting.

Section B:

1. Speech, Language, and Communication Needs (SLCN): Significant delay in expressive and receptive language, including limited vocabulary and difficulty following simple instructions.
2. Social, Emotional, and Mental Health (SEMH): Challenges with emotional regulation, manifesting as frustration-based outbursts when unable to communicate needs, and difficulty engaging in shared play.

Section C:

No specific medical diagnoses identified. The child requires routine monitoring of hearing to ensure that communication difficulties are not exacerbated by auditory processing issues.

Section D:

The child requires a consistent, predictable routine to support his emotional security. He benefits from a high level of adult supervision to facilitate social interactions and manage transitions between activities.

Section E:

1. To increase expressive vocabulary to at least 50 functional words/signs to reduce frustration.
2. To follow two-step verbal instructions with visual support in 4 out of 5 opportunities.
3. To engage in parallel play with a peer for 5 minutes with adult facilitation.
4. To demonstrate improved emotional regulation by using a "calm-down" strategy (e.g., sensory tool) when prompted.

Section F:

1. Access to a language-rich environment with high-frequency use of visual aids (e.g., PECS or Makaton).
2. Daily small-group or 1:1 sessions focusing on speech and language development, delivered by a trained teaching assistant under the guidance of a Speech and Language Therapist (SLT).
3. Implementation of a structured visual timetable to support transitions.
4. Access to a sensory-friendly space to support emotional regulation.

Section G:

Annual review of speech and language progress by a visiting SLT. Provision of a sensory diet plan to be implemented by school staff to support regulation.

Section H1:

Provision of a key worker to support the child's integration into the setting and to provide consistent emotional scaffolding during the school day.

Section H2:

Access to parent-training workshops regarding communication strategies and behavior management to ensure consistency between home and the educational setting.

Section I:

[Name of State-Funded Primary School/Nursery Unit]

Section J:

Not applicable at this time.

Section K:

1. Educational Psychologist Report (dated [Date]).
2. Speech and Language Therapy Assessment (dated [Date]).
3. Early Help Assessment/Family Support Plan.
4. Parental and professional consultation notes.
